Ро	Point values are assigned for each question.		Points earned: / 74, %	
1.	do	cument on Moodle that explains the i	after inserting a node with the key 0043. Use the nsertion process succinctly. List the case you applied (i.e. 1, fix the tree (also listed in the document).	
	a)	Draw the tree after a regular binary	search tree insertion. (3 points)	
	b)	Which property is violated? (3 points	s)	
		Case seen after regular binary search	tree insertion: (3 points)	
		Steps taken to fix the tree: (3 points)	·	
		Draw the tree after taking the steps	you just described. (3 points)	
	c)	Which property is violated now? (3 p	points)	
		Case seen after first fixup: (3 points)		

2.		w the 2-3 tree after inserting each of the following keys. Redraw the tree for each part. 50 (1 point)
	b)	76 (1 point)
	c)	23 (3 points)
	d)	21 (3 points)
	e)	20 (3 points)
	f)	19 (3 points)
	g)	18 (3 points)

Draw the tree after taking the steps you just described. (3 points)

3.	Read pages 241-242 in the textbook. Using that information, write pseudocode for computing the
	LCM of an array A[1n] of integers. You may assume there is a working gcd() function. (6 points)

// Computes the least common multiple of all the integer in array A

4. Horner's method:

$$p(x) = 4x^4 + 5x^3 - 2x^2 - 4x + 7$$

- a. Repeatedly factor out x in the following polynomial so that you can apply Horner's method. Write your expression for p(x). (5 points)
- b. Show values of the array P[0..n] as needed to apply Horner's method. (3 points)
- c. Apply Horner's method to evaluate the polynomial at x=2. Make a table as we did in class showing the values x, p, n, and i, and then state your final answer for p(2). (5 points)

- d. Use **synthetic** (not long) **division** to divide p(x) by x-2 to check your work. Be sure to show your work. (5 points)
- 5. Rewrite the *LeftRightBinaryExponentiation* algorithm on page 237 in the textbook to work for n=0 as well as any positive integer. *No credit will be given for answers that simply start with an if statement for n = 0.* (6 points)

ALGORITHM LeftRightBinaryExponentiation(a, b(n)):
